

## WHAT CODETRY IS

Codetry is a naming and structure discipline — a documented method for communities that want to design and run their own digital tools. Every boundary, every interface, and every name is treated as a decision that either builds or erodes trust. The discipline organizes community life into six zones (household outward) and two primitives: the *Saltbox* (one bounded thing you can point at) and the *Both-States test* (a tool that works empty and full, from day one). **Codetry is not a product — it is a transferable method for communities that want to own their infrastructure.**

## WORKING CONSTELLATION — ELEVEN TOOLS ACROSS FOUR ZONES

These tools are live and in active use by households, producers, and community organizations in Northwestern Ontario — all scoped, named, and built under the Codetry discipline:

|                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ZONE 0</b><br><i>Household</i>               | <b>Saltbox</b> — Offline-first homeschool day companion. No account, no cloud.<br><b>Family Buckets</b> — Household chores, savings goals, and memory-keeping. Full badge and payout ledger.<br><b>North Star</b> — Daily hub for an ADHD-inattentive entrepreneur — zones, triage, seasonal review.<br><b>Fridge to Table</b> — AI-assisted ingredient-to-meal planning. No account required.                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>ZONE 1</b><br><i>Circle</i>                  | <b>Sandbox</b> — Calm weekly bulletin board for ~60 Dryden homeschool families. Invite-only; freezes Saturday, resets Sunday.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>ZONE 3-4</b><br><i>Community &amp; Trade</i> | <b>807 Benefits</b> — Co-op membership hub — producer onboarding, buying rounds, payout cycles, dual-signature authorization.<br><b>Market Mosaic</b> — Regional farmers' market platform — shoppers, vendors, and coordinators across Northwestern Ontario.<br><b>Rootwork</b> — Command center for small food entrepreneurs — photo triage, pitch generation, delivery route management.<br><b>Grants Finder</b> — AI-assisted grant discovery for NW Ontario orgs. Two personas score fit and flag deal-breakers.<br><b>AGM Guide</b> — Mobile-friendly annual meeting tool — live secretary notes, real-time board display, reusable co-op template.<br><b>Deadhead</b> — Founder triage for mental-load management — captures loose ends and routes to a trusted spotter. |

## FUNDING FIT

|                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>NOHFC</b><br>Community economic development and capacity-building. Place-based, Northwestern Ontario-rooted, replicable asset. Eleven working tools already in active community use. <i>Hook: Community-held digital infrastructure as regional economic capacity.</i>                 | <b>FEDNOR</b><br>Rural and northern innovation. Working software built outside urban tech corridors — a food co-op, a farmers' market network, and household tools for real northern families. <i>Hook: Applied rural innovation — tools built by and for the communities that use them.</i> |
| <b>ABORIGINAL ECONOMIC DEVELOPMENT</b><br>Codetry's ownership model — community holds the tool, no third-party dependency — aligns with Indigenous data sovereignty and local economic control principles. <i>Hook: A naming and structure discipline designed to keep control local.</i> | <b>CONFEDERATION COLLEGE APPLIED RESEARCH</b><br>The documentation requirement of a Codetry pilot is natural research output. A student cohort could own the replication guide with a live NW Ontario test case. <i>Hook: Applied community technology research grounded in the North.</i>   |

## THE ASK

Fund a documented pilot: one partner community, one year, one clear deliverable — a Codetry-scoped tool built with and for that community, documented well enough that a second community could repeat it without our help. The partner community ends the pilot owning something they built, understanding how it works, and able to teach the next person.
