

Codetry — A Discipline for Community Economics

Partnership & Funding Brief · 2025

WHAT CODETRY IS

Codetry is a naming and structure discipline — a documented method for communities that want to design and run their own digital tools. The discipline organizes community life into six zones (household outward) and two primitives: *the Saltbox* (one bounded thing you can point at) and *the Both-States test* (a tool that works empty and full, from day one). Every name is chosen the way a stone mason lays stone: weight-bearing, fit for purpose, designed to last.

Codetry is not a product company. It is a transferable method for communities that want to own their infrastructure — reliable, locally controlled, and worth teaching to the next person. What follows is the working proof.

THE WORKING CONSTELLATION — ELEVEN TOOLS ACROSS FOUR ZONES

These tools are live and in active use by real households, producers, and community organizations in Northwestern Ontario. Each was scoped, named, and built under the Codetry discipline.

ZONE 0 Household

Saltbox — Offline-first homeschool day companion. No account, no cloud. Families own their data.

Family Buckets — Chores, savings goals, and memory-keeping. Full payout ledger and badge system for kids.

North Star — Daily hub for an ADHD-inattentive entrepreneur — zones, triage, seasonal review, Gmail inbox triage.

Fridge to Table — Ingredient-to-meal assistant using Claude AI. No account, no subscription.

ZONE 1 Circle

Sandbox — Calm weekly bulletin board for ~60 Dryden homeschool families. Invite-only. Replaces overloaded Signal threads. Freezes Saturday night, resets Sunday.

ZONE 3–4 Community & Trade

807 Benefits — Flagship co-op membership hub. Producer onboarding, buying rounds, payout cycles, dual-signature authorization, and member tiering.

Market Mosaic — Regional farmers' market platform for Northwestern Ontario. Shoppers, vendors, and coordinators — roster management, weekly inventory, and attendance.

Rootwork — Quiet command center for small food entrepreneurs. Photo triage, pitch generation, delivery route management. Built for the farmer who has everything in their head.

Grants Finder — AI-assisted grant discovery for Northwestern Ontario organizations. Two personas (Fern & Sage) analyze project fit, flag deal-breakers, and score eligibility.

AGM Guide — Mobile-friendly annual general meeting tool. Live secretary notes, real-time board display, swipeable pillars. Designed to become a reusable co-op template.

Deadhead — Founder triage system for mental-load management. Captures ideas and operational loose ends; routes to a trusted spotter for review.

THE ASK

Fund a documented pilot: one partner community, one year, one clear deliverable — a Codetry-scoped tool built with and for that community, documented well enough that a second community could repeat it without our help. The partner community ends the pilot owning something they built, understanding how it works, and able to teach the next person.

FUNDING FIT

NOHFC

Community economic development and capacity-building mandate. The pilot is place-based, Northwestern Ontario-rooted, and produces a replicable asset. *Hook: Community-held digital infrastructure as regional economic capacity.*

FEDNOR

Rural and northern innovation programming. Eleven working tools built outside urban tech corridors, serving an active food co-operative and 60+ families. *Hook: Applied rural innovation — tools built by and for the communities that use them.*

ABORIGINAL ECONOMIC DEVELOPMENT

Codetry's ownership model — community holds the tool, no third-party dependency — aligns with Indigenous data sovereignty principles. *Hook: A naming and structure discipline designed to keep control local.*

CONFEDERATION COLLEGE APPLIED RESEARCH

The documentation requirement of the pilot is natural research output. A student cohort could own the replication guide. *Hook: Applied community technology research with a live Northern Ontario test case.*
